

Nambuli Contribution Report

Nambuli Ndaitavela Ndapwoshisho Contribution Report

Student Details

- GitHub username: Ndaitavela
- Email: ndaitavelandapwa059@gmail.com
- Repository: NambuliNdaitavelaPortfolio
- Live portfolio: <https://Ndaitavela.github.io/NambuliNdaitavelaPortfolio/>
- Project: SiteSpy

Identity Note

This student appears in project records as Nambuli NN and Ndaitavela. This final portfolio uses one deployment identity: Nambuli Ndaitavela Ndapwoshisho.

Contribution Area

My contribution focused on the SiteSpy dashboard experience, mobile interface review, card and section structure, theme consistency, and responsive layout checks.

Project Context

SiteSpy is a mobile construction support app that helps users capture project details, review wall measurements, estimate materials, and organise project records for later reporting.

Evidence Files

- 'src/screens/DashboardScreen.js'
- 'src/components/AppCard.js'
- 'src/components/SectionHeader.js'
- 'src/theme/'

Challenge and Solution

The main challenge was keeping the dashboard clear on small mobile screens while still showing useful project and estimate information. The solution was to focus on compact cards, readable section headings, consistent theme colors, and simple responsive layout checks.

Skills Demonstrated

- Mobile UI review
- Dashboard layout planning
- Reusable card and section structure
- Theme consistency
- GitHub workflow
- Static GitHub Pages portfolio deployment

Learning Reflection

I strengthened my understanding of how small interface decisions affect the usability of a mobile app. I also learned how portfolio evidence, GitHub workflow, and clear documentation help explain an individual contribution in a team project.
